

GLOBAL BIODIVERSITY FRAMEWORK (GBF) 2030 GOALS

1. All natural areas will be properly planned and managed to reduce biodiversity loss.
2. 30% of degraded ecosystems will be restored.
3. 30% of terrestrial, freshwater, and marine ecosystems will be conserved (30x30).
4. Species extinction will be halted, genetic diversity preserved, and human-wildlife conflict managed effectively.
5. The harvesting and trade of wild species will be sustainable, safe, and legal.
6. The introduction of invasive alien species will be reduced by 50%; their impacts minimized.
7. Pollution will be reduced to levels that do not harm biodiversity.
8. The impacts of climate change on biodiversity will be minimized, and resilience increased.
9. Wild species providing benefits to people will be sustainably managed.
10. Biodiversity and sustainability will be enhanced in agriculture, aquaculture, fisheries, and forestry.
11. Nature's contributions to people will be restored, protected, and enhanced.
12. Green spaces and urban planning will be developed for human well-being and biodiversity.
13. Benefits from genetic resources, digital sequence information, and traditional knowledge will be shared more widely.
14. Biodiversity will be integrated into decision-making at all levels.
15. Companies will assess, disclose, and mitigate their biodiversity-related risks and impacts.
16. Sustainable consumption options will be promoted to reduce waste and overconsumption.
17. Biosecurity will be strengthened, and the benefits of biotechnology widely disseminated.
18. Harmful incentives to biodiversity will be reduced, and positive incentives increased.
19. USD 200 billion per year will be mobilized from all sources for biodiversity.
20. Capacity for biodiversity action will be developed, and technology transfer and scientific-technical cooperation strengthened.
21. Knowledge on biodiversity action will be available and accessible.
22. Everyone's participation in decision-making, access to biodiversity information, and justice will be ensured.
23. Gender equality and a gender-responsive approach will be ensured in biodiversity action.
